

écosphère
DEDICATED TO BIODIVERSITY

Ecosphere,

Consultancy and engineering for
Nature and sustainable development

Belief, rigor and dialogue
for a reasoned approach of Biodiversity

www.ecosphere.fr

Ecosphere has been active for over 35 years in consulting and engineering for nature and sustainable development, in France and Europe as well as overseas and at an international scale.

Ecosphere has adapted to a fast-changing environmental sector, with a presence across France, while remaining totally independent, human-scale and faithful to its core values:

BELIEF

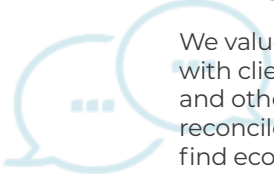

Biodiversity is a source of irreplaceable values: each project must take it into account, in compliance with the current legislation.

RIGOR

All our missions are carried out with a concern for quality and efficiency to deliver assessments and proposals adapted to each context.

DIALOGUE

We value the quality of our dialogue with clients, administrative departments and other stakeholders: the aim is to reconcile everyone's interests in order to find economically viable and ecologically sustainable solutions.

Our team of highly qualified professionals (ecological engineers, botanists, wildlife specialists, wetland specialists, hydro-ecologists, marine biologists, geomatics specialists, etc.) **provides objective expertise and advice tailored to the specific needs of each project, focusing on quality, pragmatism, and innovation.**

ASSESSMENTS AND TECHNICAL EXPERTISES

Regulatory issues: environmental evaluations, environmental impact assessment (EIA), Natura 2000 impact assessment, Protected species derogation requests, Water Act regulation issues including wetlands, etc.

Natural habitat and site expertise prior to development projects: surveys and ecological studies, assessing site sensitivity and prioritizing issues, identification of environmental and regulation limitations.

Marine expertise: submarine cables, harbor facilities, offshore wind farms, underwater acoustics.

Ecological and environmental monitoring: scientific monitoring, mitigation measure follow-up, assessment of redevelopment quality, regulatory watch (especially wind power).

BIODIVERSITY POLICIES

Conception and assessment of nature conservation and land use planning policies: Blue-green networks, Regional planning documents (ecological consistency, land-use, etc.), biodiversity atlases, rural development (forestry policy, agri-environmental measures, etc.).

Scientific support to uphold a project (develop a scientific case, guidance, etc.)

Conservation: protected or sensitive areas, Natura2000 impact assessment... including different types of expertise: scientific, technical, financial and regulatory.

Wetlands: identification, characterisation, mapping and functionality analyses (based on recognized and official methodology).

ECOLOGICAL ENGINEERING

Project design with an ecological component: feasibility studies, preliminary drafts projects, management plans, mitigation measure design, etc.

Supervision of ecological engineering works: supervision of works carried out by contractors, technical assistance to the project owner, biodiversity referent, etc.

Specialized works (high level of ecological skills): protected species relocation, innovative revegetation processes, pond creation, natural habitat restoration, etc.

Urban ecology: planning design and monitoring, certification audits (BREEAM, BiodiverCity, etc.), ecological follow-up as part of a project.

RESEARCH AND INNOVATION

Methodological studies: ecological assessments, calibration of mitigation measures, biodiversity indicators, etc.

Research programs (in-company thesis, R&D, etc.): bioacoustics, aerial monitoring, AI, eDNA, invasive species control, automated detection systems, marine bioindicators, photovoltaic plant impacts, etc.

New technologies: UAVs, laser rangefinders, radar, GSM-GPRS beacons, etc.

Numerous scientific publications, in partnership with CNRS, INRA, MNHN, CBN, etc.

COMMUNICATION, TRAINING

Design of educational materials: information panels, guides, and technical brochures (quarry and biodiversity, ecological developments, etc.), filmography

Training organisation and facilitation (universities, private clients, administration, on-site or in a classroom, etc.)
